Dear Hiring Manager,

I am writing to express my interest in Fullstack Developer and Web Systems Engineer opportunities. With more than six years of experience across GovTech, aviation, finance, insurance, e-commerce, IoT, and AI-enabled platforms, I bring a practical record of building reliable applications, integrating complex systems, and delivering production software from backend services through user-facing interfaces.

In my current GovTech work, I integrated an AI CCTV Monitoring Portal across 12 regional government sites through the SPLP interoperability layer. I also delivered Survey, DTSEN, and Manunggal Raharja data pipelines while helping maintain approximately 99.9% uptime, reduce cross-system data inconsistencies by approximately 30%, and support onboarding for more than 350 government and social-services operators.

My technical background includes JavaScript, TypeScript, PHP, Laravel, Node.js, Vue.js, React, Next.js, Python, Django, Go, PostgreSQL, MySQL, MongoDB, REST and SOAP APIs, Docker, and real-time technologies. Selected work includes the Susi Air Pilot Operations Dashboard, an MQTT-based enterprise IoT platform, a custom WooCommerce storefront, and data-intensive financial and legal-technology systems. This breadth allows me to contribute effectively to API design, system integration, asynchronous programming, SQL workflows, and MySQL administration.

I value clear communication, maintainable implementation, and measurable operational outcomes. I would welcome the opportunity to discuss how my fullstack experience and systems-integration background could support your engineering team and product goals.

Sincerely,

Amirul Putra Justicia
